EDUCATION

Carnegie Mellon University, Robotics Institute — Pittsburgh, PA
- M.S. in Computer Vision | Cumulative GPA: 4.04/4.3 — Aug 2019 – Dec 2020

Beihang University, School of Software Engineering — Beijing
- B.E. in Software Engineering | GPA: 88.1/100, Overall Ranking: 6/149 — Sep 2015 – Jun 2019

CAPSTONE PROJECT

Semantic Facial Image Manipulation using 2D/3D Modalities, *Sponsored by Fujitsu*
Supervisor: *Dr. Laszlo Jeni* — Ongoing since Feb 2020
- Building a facial expression manipulation model to generate photorealistic images based on FACS.
- Designed an end-to-end trained two-stage pipeline to manipulate the image: (i) warp the image based on an optical flow estimated with 3D geometry (ii) inpaint the image to generate emotion-specific details such as wrinkles.

EXPERIENCE

SenseTime, Research Intern — Beijing

TransMoMo: Invariance-Driven Unsupervised Video Motion Retargeting
Supervisor: *Wayne Wu* — May 2019 - Nov 2019
- Designed an autoencoder framework to learn latent representations of human motion from unpaired videos.
- Achieved unsupervised representation disentanglement by exploiting invariance properties of three orthogonal factors of variation including motion, structure, and view-angle.

RESEARCH

Scene Graph Reasoning with Prior Visual Relationship for Visual Question Answering
Supervisor: *Assoc. Prof. Zengchang Qin* — Jul 2018 - Dec 2018
Intelligent Computing and Machine Learning Lab, Beihang University Beijing
- Designed a graph neural network approach to enable agents to reason visual relationships on scene graphs.
- Introduced prior knowledge of visual relationships via visual relationship metric learning. A deep semantic space constrained by visual context and language priors is learned for visual relationships.

Multi-Temporal Remote Sensing Image Registration Using Deep Convolutional Features
Supervisor: *Assoc. Prof. Yang Yang* — Jan 2018 - Apr 2018
Engineering Research Center of GIS Technology in Western China, Yunnan Normal University Kunming
- Proposed a VGG-pyramid feature based multi-temporal remote sensing image registration method.
- Improved RMSE by 20% on remote sensing images with temporal appearance changes.

Non-rigid Image Registration with Dynamic Gaussian Component Density and Space Curvature Preservation Supervisor: *Assoc. Prof. Yang Yang* — Mar 2017 - Dec 2017
Engineering Research Center of GIS Technology in Western China, Yunnan Normal University Kunming
- Designed a dynamic Gaussian component density to progressively exploit available image information and provide sufficient credible correspondences for image registration.
- Devised a space curvature preservation to improve the plausibility of estimated transformation.

COURSES

10-601 Machine Learning - A+, 16-720B Computer Vision - A, 15-462 Computer Graphics - A
16-811 Math Fundation for Robotics - A, 15-463 Computational Photography - Ongoing
